

Table of Contents

I. The Schrödinger Equation.....	1
A. The Weirdness of Quantum Mechanics.....	1
B. The Schrödinger Equation.....	6
C. The Meaning of the Wave Function.....	9
D. The Fourier Transform of the Wave Function.....	11
E. Expectation Values and Uncertainties.....	13
Problems for Chapter 1.....	15
II. Solving Schrödinger's equation.....	16
A. Solving Schrödinger's Equation in Free Space.....	16
B. The Time-independent Schrödinger equation.....	18
C. Probability Current.....	20
D. Reflection from a Step Boundary.....	22
E. Quantum Tunneling.....	25
F. The Infinite Square Well.....	26
G. Bound States from a Double Delta potential.....	28
Problems for Chapter 2.....	32
III. Hilbert Space and Vector Spaces.....	33
A. Hilbert Space.....	33
B. Dirac Notation and Covectors.....	35
C. Coordinate Bases.....	38
D. Operators.....	40
E. Commutators.....	42
F. Adjoint Operators.....	43
G. Matrix Notation.....	46
H. Eigenvectors and Eigenvalues.....	48
I. Finding Eigenvectors and Eigenvalues.....	50
Problems for Chapter 3.....	53
IV. The Postulates of Quantum Mechanics.....	55
A. Revisiting Representations.....	55
B. The Postulates of Quantum Mechanics.....	56
C. Consistency of the Postulates.....	59
D. Measurements and Reduction of the Wave Function.....	61
E. Expectation Values and Uncertainties.....	64
F. Evolution of Expectation Values.....	66
G. The Time-Independent Schrödinger Equation.....	67
Problems for Chapter 4.....	70
V. The Harmonic Oscillator.....	72
A. The 1D Harmonic Oscillator.....	72
B. Working with the Harmonic Oscillator and Coherent States.....	75
C. Multiple Particles and Harmonic Oscillators.....	78
D. The Complex Harmonic Oscillator.....	81
Problems for Chapter 5.....	83

VI. Symmetry.....	84
A. The Translation Operator	84
B. Rotation Operators	86
C. Parity and the Finite Square Well	90
D. Discrete Rotations	93
E. Discrete Translations and the Kronig-Penney Model	95
F. Continuous Symmetries and Generators	98
G. Solving Problems with Continuous Symmetries	100
Problems for Chapter 6	104
VII. Angular Momentum	106
A. Angular Momentum Commutation Relations.....	106
B. Generalized Angular Momentum.....	108
C. Spherically Symmetric Problems	110
D. Spherical Harmonics	114
E. The Hydrogen Atom.....	116
F. Hydrogen-like atoms	122
G. Tables of Spherical Harmonics and Radial Wave Functions.....	124
Problems for Chapter 7	125
VIII. Spin and Adding Angular Momentum.....	127
A. Rotations revisited.....	127
B. Total Angular Momentum and Addition of Angular Momentum.....	130
C. Clebsch-Gordan Coefficients	134
D. Scalars, Vectors, Tensors	136
E. The Wigner-Eckart Theorem.....	140
F. Products of Spherical Harmonics	142
Problems for Chapter 8	144
IX. Electromagnetic Forces	147
A. Electric Forces.....	147
B. Electromagnetic Fields and Forces	149
C. Working with Kinematic Momentum	152
D. Magnetic Dipole Moments.....	153
E. Simple Problems with Magnetic Fields.....	155
F. The Aharonov-Bohm Effect and Magnetic Monopoles.....	158
Problems for Chapter 9	161
X. Multiple Particles	163
A. Tensor Products of Vector Spaces	163
B. Multiple Particles	164
C. Symmetry and Interchangeable Particles	165
D. Identical Particles.....	167
E. Non-Interacting Particles and Fermi Degeneracy Pressure.....	170
F. Atoms.....	174
Problems for Chapter 10	178

XI. Interpretation of Quantum Mechanics	180
A. The Time Evolution Operator	180
B. The Propagator	182
C. The Feynman Path Integral Formalism	184
D. The Heisenberg Picture	187
E. The Trace	190
F. The State Operator, or Density Matrix	191
G. Working with the State Operator	195
H. Separability	197
I. Hidden Variables and Bell's Inequality	200
J. Measurement	204
K. The Many Worlds Interpretation of Quantum Mechanics	209
Problems for Chapter 11	212
XII. Approximate Methods for Time Independent Systems	215
A. The Variational Approach	215
B. The WKB Method	221
C. Perturbation Theory	227
D. Degenerate Perturbation Theory	231
Problems for Chapter 12	234
XIII. Applications of Approximation Methods	236
A. Finite Nuclear Size	236
B. Spin-Orbit Coupling	238
C. Hyperfine Splitting	241
D. The Zeeman Effect	244
E. The Van Der Waals Interaction	245
Problems for Chapter 13	249
XIV. Scattering	251
A. Cross-Section and Differential Cross-Section	251
B. The Born Approximation	255
C. Scattering from a Spherically Symmetric Potential	259
Problems for Chapter 14	265
XV. Time-Dependent Methods	267
A. The Sudden Approximations	267
B. The Adiabatic Approximation	268
C. Time-dependent Perturbation Theory	272
D. Harmonic Perturbations	275
E. Electromagnetic Waves and the Dipole Approximation	278
F. Beyond the Dipole Approximation	282
G. Time-dependent perturbation theory with a constant perturbation	283
Problems for Chapter 15	287

XVI. The Dirac Equation.....	289
A. The Dirac Equation.....	289
B. Solving the Free Dirac Equation.....	292
C. Electromagnetic Interactions and the Hydrogen Atom.....	294
Problems for Chapter 16.....	299
XVII. Quantization of Electromagnetic Fields.....	300
A. Gauge Choice and Energy.....	300
B. Fourier Modes and Polarization Vectors.....	301
C. Quantizing the Electromagnetic Fields.....	303
D. Eigenstates of the Electromagnetic Fields.....	304
E. Momentum of photons.....	305
F. Taking the infinite volume limit.....	306
G. The nature of the vacuum.....	307
H. The Casimir effect.....	308
Problems for Chapter 17.....	311
XVIII. Photons and Atoms.....	313
A. The Hamiltonian.....	313
B. Absorption and Emission of Photons by Atoms.....	315
C. The Self-Energy of the Electron.....	318
D. Photon Scattering.....	318
E. A Diagrammatic Approach.....	319
F. Thomson Scattering.....	320
G. Scattering Away From a Resonance.....	322
H. Scattering Near a Resonance.....	326
Problems for Chapter 18.....	331
Appendix A. Some Mathematical Tools of Quantum Mechanics.....	333
A. Calculus with One Variable.....	333
B. Calculus with Several Variables.....	336
C. Coordinates in Two and Three Dimensions.....	338
D. Special Functions.....	342
E. The Dirac Delta function.....	344
F. Fourier Transforms.....	346
Appendix B. Units and Constants.....	348
