

# Table of Contents

I. The Schrödinger Equation .....	1
A. The Weirdness of Quantum Mechanics .....	1
B. The Schrödinger Equation.....	6
C. The Meaning of the Wave Function.....	9
D. The Fourier Transform of the Wave Function .....	12
E. Expectation Values and Uncertainties .....	13
Problems for Chapter 1 .....	15
II. Solving Schrödinger’s equation .....	16
A. Solving Schrödinger’s Equation in Free Space.....	16
B. The Time-independent Schrödinger equation .....	18
C. Probability Current.....	20
D. Reflection from a Step Boundary.....	22
E. The Infinite Square Well .....	26
F. Bound States from a Double Delta potential .....	27
Problems for Chapter 2 .....	31
III. Hilbert Space and Vector Spaces .....	32
A. Hilbert Space.....	32
B. Dirac Notation and Covectors .....	34
C. Coordinate Bases.....	36
D. Operators .....	39
E. Commutators .....	41
F. Adjoint Operators .....	42
G. Matrix Notation.....	45
H. Eigenvectors and Eigenvalues .....	47
I. Finding Eigenvectors and Eigenvalues.....	49
Problems for Chapter 3 .....	53
IV. The Postulates of Quantum Mechanics .....	54
A. Revisiting Representations.....	54
B. The Postulates of Quantum Mechanics.....	55
C. Consistency of the Postulates .....	58
D. Measurements and Reduction of the Wave Function .....	60
E. Expectation Values and Uncertainties.....	63
F. Evolution of Expectation Values .....	65
G. The Time-Independent Schrödinger Equation.....	67
Problems for Chapter 4 .....	70
V. The Harmonic Oscillator.....	72
A. The 1D Harmonic Oscillator.....	72
B. Working with the Harmonic Oscillator and Coherent States.....	76
C. Multiple Particles and Harmonic Oscillators .....	78
D. The Complex Harmonic Oscillator .....	81
Problems for Chapter 5 .....	83

VI. Symmetry.....	84
A. The Translation Operator .....	84
B. Rotation Operators .....	86
C. Parity and the Finite Square Well .....	90
D. Discrete Rotations .....	94
E. Discrete Translations and the Kronig-Penney Model .....	96
F. Continuous Symmetries and Generators .....	99
G. Solving Problems with Continuous Symmetries .....	101
Problems for Chapter 6 .....	105
VII. Angular Momentum .....	107
A. Angular Momentum Commutation Relations.....	107
B. Generalized Angular Momentum.....	109
C. Spherically Symmetric Problems .....	112
D. Spherical Harmonics .....	115
E. The Hydrogen Atom.....	117
F. Hydrogen-like atoms .....	123
G. Tables of Spherical Harmonics and Radial Wave Functions.....	125
Problems for Chapter 7 .....	126
VIII. Spin and Adding Angular Momentum.....	128
A. Rotations revisited.....	128
B. Total Angular Momentum and Addition of Angular Momentum.....	131
C. Clebsch-Gordan Coefficients .....	135
D. Scalars, Vectors, Tensors .....	137
E. The Wigner-Eckart Theorem.....	141
F. Products of Spherical Harmonics .....	143
Problems for Chapter 8 .....	145
IX. Electromagnetic Forces .....	148
A. Electric Forces.....	148
B. Electromagnetic Fields and Forces .....	150
C. Working with Kinematic Momentum .....	153
D. Magnetic Dipole Moments.....	154
E. Simple Problems with Magnetic Fields.....	156
F. The Aharanov-Bohm Effect and Magnetic Monopoles.....	159
Problems for Chapter 9 .....	162
X. Multiple Particles .....	164
A. Tensor Products of Vector Spaces .....	164
B. Multiple Particles .....	165
C. Symmetry and Interchangeable Particles .....	166
D. Identical Particles.....	168
E. Non-Interacting Particles and Fermi Degeneracy Pressure.....	171
F. Atoms.....	175
Problems for Chapter 10 .....	179

XI. Interpretation of Quantum Mechanics .....	181
A. The Time Evolution Operator .....	181
B. The Propagator .....	183
C. The Feynman Path Integral Formalism .....	185
D. The Heisenberg Picture .....	188
E. The Trace .....	191
F. The State Operator, or Density Matrix .....	192
G. Working with the State Operator .....	196
H. Separability .....	198
I. Hidden Variables and Bell's Inequality .....	201
J. Measurement .....	205
Problems for Chapter 11 .....	213
XII. Approximate Methods for Time Independent Systems .....	216
A. The Variational Approach .....	216
B. The WKB Method .....	222
C. Perturbation Theory .....	228
D. Degenerate Perturbation Theory .....	233
Problems for Chapter 12 .....	235
XIII. Applications of Approximation Methods .....	237
A. Finite Nuclear Size .....	237
B. Spin-Orbit Coupling .....	239
C. Hyperfine Splitting .....	242
D. The Zeeman Effect .....	245
E. The Van Der Waals Interaction .....	246
Problems for Chapter 13 .....	250
XIV. Scattering .....	252
A. Cross-Section and Differential Cross-Section .....	252
B. The Born Approximation .....	256
C. Scattering from a Spherically Symmetric Potential .....	260
Problems for Chapter 14 .....	266
XV. Time-Dependent Methods .....	268
A. The Sudden Approximations .....	268
B. The Adiabatic Approximation .....	269
C. Time-dependent Perturbation Theory .....	273
D. Harmonic Perturbations .....	276
E. Electromagnetic Waves and the Dipole Approximation .....	279
F. Beyond the Dipole Approximation .....	283
G. Time-dependent perturbation theory with a constant perturbation .....	284
Problems for Chapter 15 .....	288
Appendix A. Some Mathematical Tools of Quantum Mechanics .....	290
A. Calculus with One Variable .....	290
B. Calculus with Several Variables .....	293
C. Coordinates in Two and Three Dimensions .....	295
D. Special Functions .....	299

E. The Dirac Delta function .....	301
F. Fourier Transforms .....	304
Appendix B. Units and Constants.....	306
