

NAN 242 10 – Nanofabrication of Thin Films

Welcome to NAN 242 – Nanofabrication of Thin Films. The goal of this course is to introduce the techniques used in thin film fabrication and testing and to explore how nanomaterials affect these processes. The course will have both lectures and labs.

Instructor: K. Burak Ucer, Research Associate Professor, Wake Forest University, Dept. of Physics. Office: Olin 305D (WFU - Reynolda campus), phone: 336-758-4989, e-mail: ucerkb@wfu.edu

Lectures will be held Mondays 8 – 10 AM and Thursdays 8 – 11 AM at the WFU Center for Nanotechnology (Nanotech).

Lecture notes and other material will be handed out in class and also posted online at the class web site at <http://www.wfu.edu/~ucerkb/Nan242.html>.

Labs will be held at the WFU Nanotechnology Center, WFU Physics Dept., or FTCC.

Course Outline

- | | |
|------------------------------|--|
| 1. Introduction | 10. Optics |
| 2. Basic solid state physics | 11. Optical spectroscopy |
| 3. Vacuum technology | 12. Electron, x-ray and ion spectroscopy |
| 4. Deposition techniques | 13. Microscopy |
| 5. Vacuum evaporation | 14. Electrical and mechanical measurements |
| 6. Sputtering | 15. Special topics |
| 7. CVD | |
| 8. Thin film growth | |
| 9. Basic E&M | |

Labs

1. Doctor blade
2. Vacuum evaporation
3. Spin coating
4. Spectrophotometer
5. Photoluminescence
6. 4-point probe
7. AFM

Grading

- 3 quizzes : 5 questions - 45 min. each – announced a week in advance
- 1 lab report : take home for two weeks, a short summary of each lab
- 1 final : 10 questions, 3 hours, April 25, 2008, 8:30 AM

While there will be no regular office hours, one-on-one meetings can be arranged by appointment. I can be contacted through e-mail or phone.
